GLT supports Global Lighting Challenge

German Led Tech is an european based manufacture of high quality, high efficacy and sustainable LED Tubes. By using existing infrastructure we are minimizing the energy consumption already in the production.

It is estimated to be about 12 billion installed fluorescent tubes in the world, of which 2 billion are replaced each year, with an average operating time of 5000 hours per year.

If we can replace all fluorescent tubes with a high operating time, it would be the fastest way to solve the most urgent problems with the increasing temperatures on earth. That is why we concentrate on the B2B market where we can make a huge effort for the environment.

Compared to a conventional 58 Watt fluorescent tube, over the course of one year one constantly operating GLT TUBE reduces CO2 emissions by the same amount a mid-range car produces over 1,400 miles.

German Led Tech commits to 100% manufacture and supply high-quality, high-efficacy LED lighting products. With our rental concept we will speed up the process of replacing fluorescent tubes to help reaching the goal of Global Lighting Challenge.
